> *"Thanks for letting me know, Sajid! For a video on gravity, here's a simple script with matching visuals: 1. **Introduction** "Hello friends! Today, we will learn about gravity—the force that pulls everything toward the Earth!" Visual: Cartoon Earth with objects like an apple, ball, and person around it. 2. **What is Gravity?** "Gravity is an invisible force that keeps us on the ground and makes things fall." Visual: An apple falling from a tree toward the ground. 3. **Gravity on Earth** "Gravity pulls everything down so we don't float away into space." Visual: Cartoon person standing firmly on the ground with arrows pointing down. 4. **Gravity in Space** "Gravity also keeps the Moon orbiting around the Earth and the Earth around the Sun." Visual: Earth, Moon, and Sun with curved arrows showing orbits. 5. **Fun Gravity Facts** "Without gravity, we couldn't walk, jump, or even drink water!" Visual: Kids jumping and playing, water pouring into a glass. 6. **Conclusion** "Gravity is an amazing force that helps us every day!" Visual: Happy cartoon Earth with smiling characters. Would you like me to add activity ideas or a storyboard for this gravity video?"*

> *"First, it cannot create proper video lesson plans. When I ask for it, it either avoids the request or gives very general answers. It does not understand exactly what I need and mostly gives fixed or built-in replies, which is not helpful. Second, when I ask for a simple lesson plan (like Class 1 English), it makes it too long and too complex. For small kids, the content should be simple, short, and easy to understand, but the chatbot makes it confusing. It feels like the chatbot: does not understand the context properly cannot adjust answers based on the need makes simple things too complicated To improve this chatbot: It should understand instructions better It should give simple and clear answers It should not make easy topics too detailed It should give more natural and flexible replies instead of fixed ones It should create proper structured lesson plans, especially for videos Overall, it needs to be smarter, simpler, and more useful for teaching purposes."*
